Subject: Selenium AWQC

Helen,

You asked me to find a value to use for the early action pertaining to the pond near the Headquarters area. It is doubtful that there are fish in the pond, but likely that there would be the larval stage of salamanders that look similar to sculpin. The AWQC is now fish tissue based, but when fish are not present, there is a lentic value of 1.5 ug/L (see footnote below the table). I recommend we use this value as a reference, but not a cleanup goal at this point.

Let me know if you have questions about this.

Joe
